

PILATUS PC-12 Feather Inhibit System

Next Generation

Legacy

Levaero's PC-12 Feather Inhibit System provides a safe, simple and effective way to virtually eliminate impact and erosion damage to your propeller that occurs during normal engine shut-down, thereby reducing propeller repair and overhaul costs, and maintaining performance.

Engine starting temperatures are typically reduced by as much as 100 degrees Celsius on quick turnarounds.

The Levaero PC-12 Feather Inhibit System is TC, FAA and EASA STC'd for all PC-12 models.
